**Airborne Early Warning System Concepts (Scitech Radar and Defense)** Maurice W. Long

Supported by 202 equations and 170 illustrations, *Airborne Early Warning System Concepts* is an invaluable reference tool for a wide audience.

It will be a welcome library addition for the engineer, scientist, system integrator, user, designer, or manager with interest in AEW concepts. It is also suitable for students and professors of electrical and system engineering or military science.

## Key Features

*Airborne Early Warning Concepts* provides broad coverage of AEW system concepts and enabling technologies, including:

- \* The development of AEW, with photographs of early and modern AEW aircraft
- \* Missions and system requirements
- \* Fixed wing aircraft, aerostat and airship systems
- \* Antenna/aircraft configurations
- \* Radar surveillance and height finding
- \* Example AEW systems
- \* Automatic Tracking
- \* Noncooperative target recognition (NCTR)

This comprehensive discussion of airborne early warning (AEW) system concepts encompasses a wide range of issues, including capabilities and limitations, developmental trends and opportunities for improvement.

Consisting of contributions from experts in the field, the book is presented at varying levels of complexity, ranging from elementary to advanced. For the generalist, the text provides a fundamental understanding of the status of AEW concepts with the use of only elementary mathematics. For the specialist, there are separate chapters that emphasize key AEW radar issues, including such topics as:

- \* Aircraft effects on sidelobe clutter
- \* Clutter and target models for AEW
- \* Radar parameter selection
- \* Clutter, false alarm, and target direction statistics
- \* Algorithms for multiple target tracking
- \* Target recognition system development

### **From reader reviews:**

#### **Lillian Tobias:**

What do you in relation to book? It is not important along? Or just adding material when you really need something to explain what you problem? How about your extra time? Or are you busy man? If you don't have spare time to accomplish others business, it is gives you the sense of being bored faster. And you have extra time? What did you do? All people has many questions above. The doctor has to answer that question due to the fact just their can do this. It said that about guide. Book is familiar in each person. Yes, it is proper. Because start from on kindergarten until university need this specific Airborne Early Warning System Concepts (Scitech Radar and Defense) to read.

#### **Mason Childress:**

A lot of people always spent all their free time to vacation or maybe go to the outside with them friends and family or their friend. Do you know? Many a lot of people spent they free time just watching TV, or maybe playing video games all day long. If you wish to try to find a new activity this is look different you can read any book. It is really fun in your case. If you enjoy the book that you simply read you can spent the entire day to reading a publication. The book Airborne Early Warning System Concepts (Scitech Radar and Defense) it is rather good to read. There are a lot of people who recommended this book. These folks were enjoying reading this book. If you did not have enough space to create this book you can buy often the e-book. You can m0ore very easily to read this book from the smart phone. The price is not too expensive but this book features high quality.

#### **Janelle Ramirez:**

Are you kind of active person, only have 10 or maybe 15 minute in your day to upgrading your mind talent or thinking skill actually analytical thinking? Then you are receiving problem with the book compared to can satisfy your short time to read it because this time you only find reserve that need more time to be examine. Airborne Early Warning System Concepts (Scitech Radar and Defense) can be your answer since it can be read by a person who have those short time problems.

#### **Chelsie Salls:**

Reading a book for being new life style in this year; every people loves to study a book. When you go through a book you can get a wide range of benefit. When you read textbooks, you can improve your knowledge, mainly because book has a lot of information upon it. The information that you will get depend on what types of book that you have read. If you would like get information about your review, you can read education books, but if you want to entertain yourself you can read a fiction books, such us novel, comics, and also soon. The Airborne Early Warning System Concepts (Scitech Radar and Defense) will give you new experience in studying a book.
