Parallel Programming: for Multicore and Cluster Systems

Thomas Rauber, Gudula Rünger

Parallel Programming: for Multicore and Cluster Systems Thomas Rauber, Gudula Rünger

Innovations in hardware architecture, like hyper-threading or multicore processors, mean that parallel computing resources are available for inexpensive desktop computers. In only a few years, many standard software products will be based on concepts of parallel programming implemented on such hardware, and the range of applications will be much broader than that of scientific computing, up to now the main application area for parallel computing. Rauber and Rünger take up these recent developments in processor architecture by giving detailed descriptions of parallel programming techniques that are necessary for developing efficient programs for multicore processors as well as for parallel cluster systems and supercomputers. Their book is structured in three main parts, covering all areas of parallel computing: the architecture of parallel systems, parallel programming models and environments, and the implementation of efficient application algorithms. The emphasis lies on parallel programming techniques needed for different architectures. The main goal of the book is to present parallel programming techniques that can be used in many situations for many application areas and which enable the reader to develop correct and efficient parallel programs. Many examples and exercises are provided to show how to apply the techniques. The book can be used as both a textbook for students and a reference book for professionals. The presented material has been used for courses in parallel programming at different universities for many years.

From reader reviews:

William Devine:

Have you spare time for any day? What do you do when you have far more or little spare time? That's why, you can choose the suitable activity with regard to spend your time. Any person spent their very own spare time to take a walk, shopping, or went to often the Mall. How about open or even read a book titled Parallel Programming: for Multicore and Cluster Systems? Maybe it is to be best activity for you. You understand beside you can spend your time along with your favorite's book, you can better than before. Do you agree with it has the opinion or you have some other opinion?

Joshua Smith:

The e-book with title Parallel Programming: for Multicore and Cluster Systems has lot of information that you can discover it. You can get a lot of profit after read this book. This specific book exist new knowledge the information that exist in this reserve represented the condition of the world currently. That is important to yo7u to learn how the improvement of the world. This book will bring you throughout new era of the the positive effect. You can read the e-book in your smart phone, so you can read the item anywhere you want.

Erica Futch:

The reason why? Because this Parallel Programming: for Multicore and Cluster Systems is an unordinary book that the inside of the publication waiting for you to snap it but latter it will surprise you with the secret it inside. Reading this book adjacent to it was fantastic author who all write the book in such incredible way makes the content within easier to understand, entertaining technique but still convey the meaning fully. So , it is good for you because of not hesitating having this anymore or you going to regret it. This phenomenal book will give you a lot of advantages than the other book have such as help improving your talent and your critical thinking approach. So , still want to hesitate having that book? If I ended up you I will go to the guide store hurriedly.

Andrea Lampkin:

That publication can make you to feel relax. This kind of book Parallel Programming: for Multicore and Cluster Systems was multi-colored and of course has pictures around. As we know that book Parallel Programming: for Multicore and Cluster Systems has many kinds or type. Start from kids until teens. For example Naruto or Investigation company Conan you can read and believe you are the character on there. Therefore , not at all of book are usually make you bored, any it offers you feel happy, fun and rest. Try to choose the best book in your case and try to like reading in which.
