Handbook of Biological Data

William S. Spector

Handbook of Biological Data William S. Spector

Seven years ago the National Academy of Sciences - National Research Council contracted with the Wright Air Development Center, United States Air Force, to gather and compile for publication, in handbook form, basic established data in the biological and medical sciences. The principal objective of the Handbook, like that of similar volumes in the fields of engineering and physical sciences, is to serve the student, the teacher, and the expert who seeks information outside his own area of specialization. Another aim has been to produce as comprehensive a work as possible and, at the same time, keep it from becoming unwieldy in size and prohibitive in cost. To achieve this goal it has been necessary to condense some 20,000 sheets of data into the present number of tables, and, further, to condense each table to the point where only the most generally useful, informative, and comprehensive material would be included. Also, by the very nature of the subject material, certain of the tables will appear elementary to the expert in the field, while to the student - a beginner in the subject of the table - or to an expert in another field, the same data may seem extremely complex. For the compiler, who cannot possess an expert knowledge of all fields in the bio-sciences, the task of choosing for publication not only the subject areas, but also data within these areas, would have been utterly impossible without the unprecedented cooperation of some 17,000 biological scientists who gave freely of their time to serve as advisers, appraisers, contributors, and reviewers.
