Nanostructured Carbon Materials for Catalysis (RSC Catalysis Series)

Philippe Serp, Bruno Machado

Nanostructured Carbon Materials for Catalysis (RSC Catalysis Series) Philippe Serp, Bruno Machado

There is great interest in using nanostructured carbon materials in catalysis, either as supports for immobilizing active species or as metal-free catalysts due to their unique structural, thermal, chemical, electronic and mechanical properties, and tailorable surface chemistry.

Nanostructured Carbon Materials for Catalysis looks at the structure and properties of different doped and undoped nanocarbons including graphene; fullerenes; nanodiamonds; carbon nanotubes and nanofibers; their synthesis and modification to produce catalysts. Special attention is paid to adsorption, as it impacts the application of these materials in various industrially relevant catalytic reactions discussed herein, in addition to photocatalysis and electrocatalysis.

Written by leading experts in the area, this is the first book to provide a comprehensive view of the subject for the catalysis community.

From reader reviews:

David Chambers:

What do you with regards to book? It is not important along with you? Or just adding material if you want something to explain what the ones you have problem? How about your free time? Or are you busy man or woman? If you don't have spare time to try and do others business, it is make you feel bored faster. And you have spare time? What did you do? All people has many questions above. They should answer that question due to the fact just their can do that will. It said that about publication. Book is familiar on every person. Yes, it is appropriate. Because start from on kindergarten until university need this kind of Nanostructured Carbon Materials for Catalysis (RSC Catalysis Series) to read.

Christina Bain:

Are you kind of stressful person, only have 10 or maybe 15 minute in your moment to upgrading your mind skill or thinking skill even analytical thinking? Then you are experiencing problem with the book when compared with can satisfy your short space of time to read it because this all time you only find e-book that need more time to be learn. Nanostructured Carbon Materials for Catalysis (RSC Catalysis Series) can be your answer as it can be read by you actually who have those short free time problems.

Kimberly Lunceford:

The book untitled Nanostructured Carbon Materials for Catalysis (RSC Catalysis Series) contain a lot of information on the item. The writer explains the girl idea with easy means. The language is very straightforward all the people, so do not necessarily worry, you can easy to read the idea. The book was written by famous author. The author will take you in the new era of literary works. You can read this book because you can read on your smart phone, or model, so you can read the book with anywhere and anytime. If you want to buy the e-book, you can open their official web-site in addition to order it. Have a nice study.

Willie McCall:

A number of people said that they feel uninterested when they reading a guide. They are directly felt the idea when they get a half parts of the book. You can choose typically the book Nanostructured Carbon Materials for Catalysis (RSC Catalysis Series) to make your reading is interesting. Your current skill of reading expertise is developing when you including reading. Try to choose very simple book to make you enjoy you just read it and mingle the idea about book and reading especially. It is to be first opinion for you to like to start a book and examine it. Beside that the book Nanostructured Carbon Materials for Catalysis (RSC Catalysis Series) can to be a newly purchased friend when you're experience alone and confuse with the information must you're doing of their time.
